

## 1. Allow domains

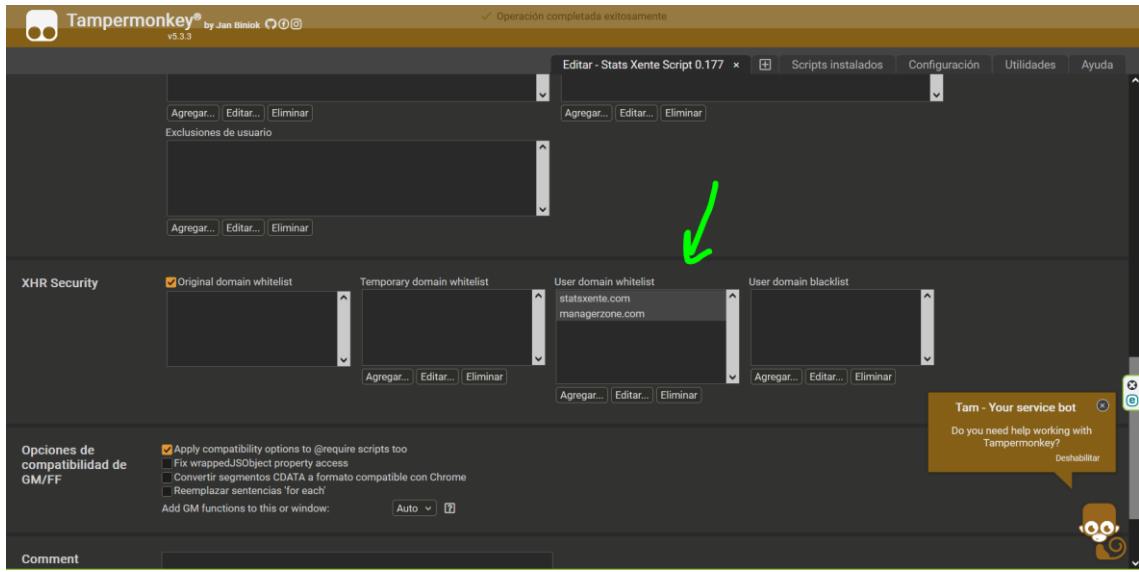

The top part of the image shows a Firefox browser window. A green arrow points from the Firefox logo to a QR code on the page. Another green arrow points from the QR code to a context menu that is open on the right side of the screen. The context menu includes options like "Activado" (Enabled), "Ningún script en ejecución" (No scripts running), "Obtener nuevos scripts..." (Get new scripts...), "Agregar nuevo script..." (Add new script...), "Por favor considera una donación" (Please consider a donation), "Utilidades" (Utilities), "Dashboard", and "Ayuda | Registro de cambios" (Help | Change Log). A green number "2" is placed near the QR code.

The bottom part of the image shows the Tampermonkey extension interface. A green arrow points from the Tampermonkey icon in the Firefox toolbar to the Tampermonkey extension's sidebar. The sidebar has a yellow header with the text "Tam - Your service bot" and a message "Do you need help working with Tampermonkey?". Below the sidebar, the main interface shows a list of installed scripts. One script, "Stats Xente Script" by xente, is selected and shown in the editor. A green arrow points from the script name in the list to the script's title bar in the editor. The editor window shows the script's code:

```
// ==UserScript==  
// @name Stats Xente Script  
// @namespace http://tampermonkey.net/  
// @version 0.177  
// @description Stats Xente script for inject own data on Managerzone site  
// @author xente  
// @match https://www.managerzone.com/*  
// @icon https://statxente.com/WZ1/View/Images/main_icon.png  
// @license GNU  
// @grant GM_xmlhttpRequest  
// @grant GM_addStyle  
// @grant GM_getValue  
// @grant GM_setValue  
// @grant GM_deleteValue  
// @grant GM_listValues  
// @require https://code.jquery.com/jquery-3.7.1.js  
// @updateURL https://update.greasyfork.org/scripts/491442/Stats%20Xente%20Script.user.js  
// @updateeURL https://update.greasyfork.org/scripts/491442/Stats%20Xente%20Script.meta.js  
// ==/UserScript=
```

The Tampermonkey extension also features a "Deshabilitar" (Disable) button in its sidebar.

Go to bottom of page and check this, else add the domains:

## 2. Enable developer tools on extensions and Tampermonkey
