# STATS XENTE MANUAL INSTALLATION
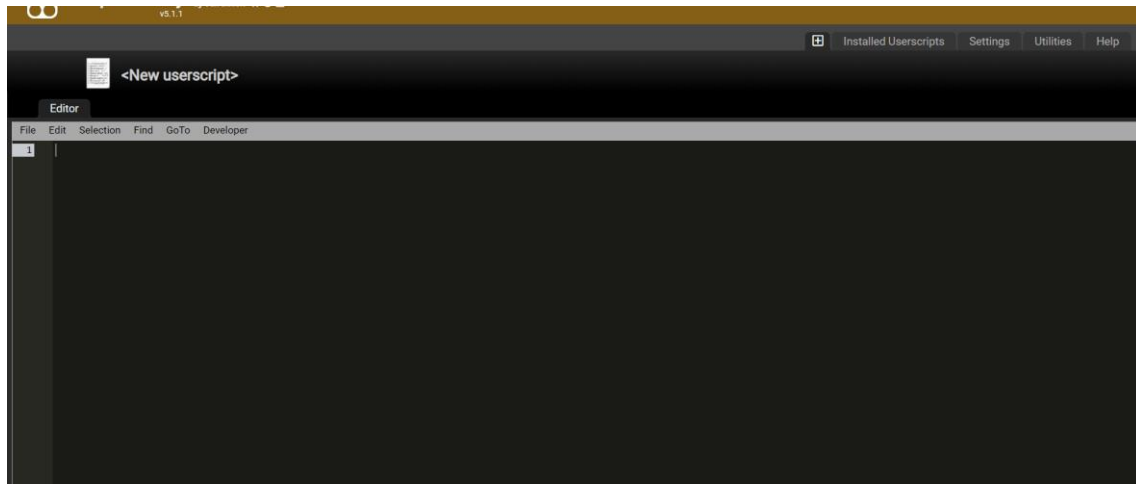

1-Prerequistes

You need to install Tampermonkey as userscripts manager and is usefull pint it to the navigation bar of your browser.
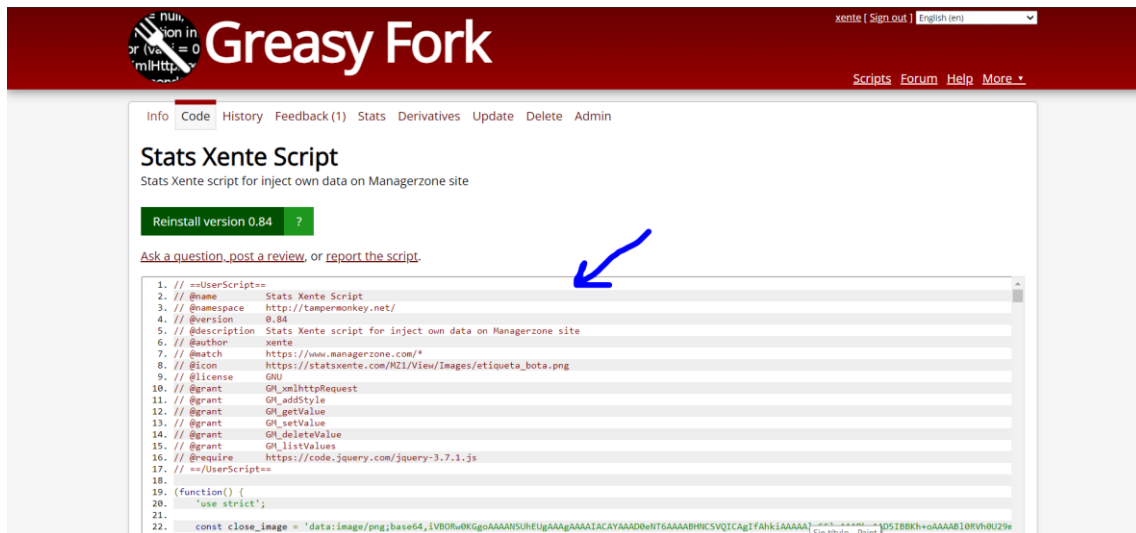

2- Create New Script

Delete all code

3-Copy/paste script code

https://greasyfork.org/es/scripts/491442-stats-xente-script

Copy all code and paste on last screen, you can use CTRL+A to select all easy

If you have problems with Greasy Fork try with github link:
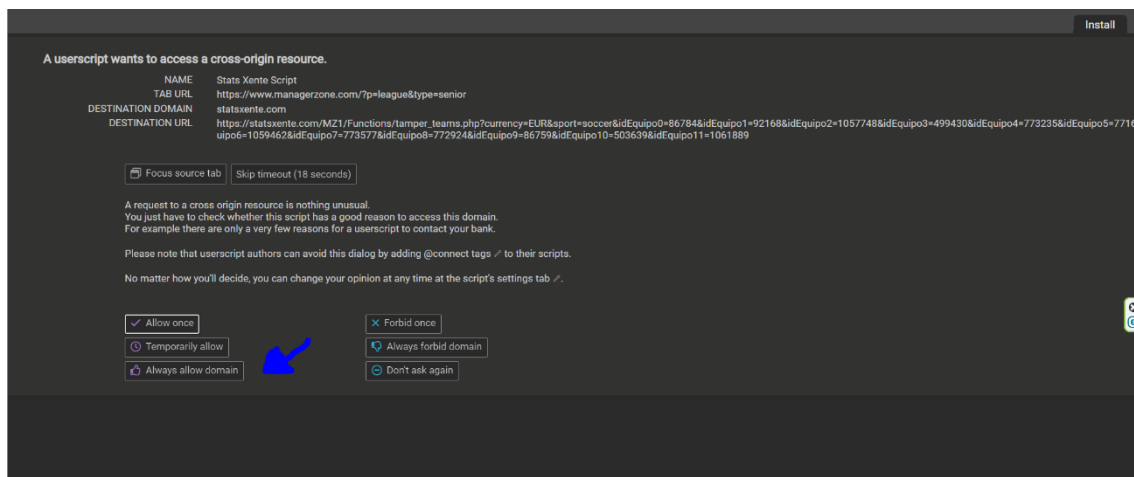

https://github.com/alexgomezg/Stats-Xente-Script/blob/main/script_user.js

Copy and paste on last screen, you can use CTRL+A to select all easy

Use CTRL+S to save all, test on Managerzone page, probably you see the next two screen captures, please click in allow always domain to allow the connections to Stats Xente site.
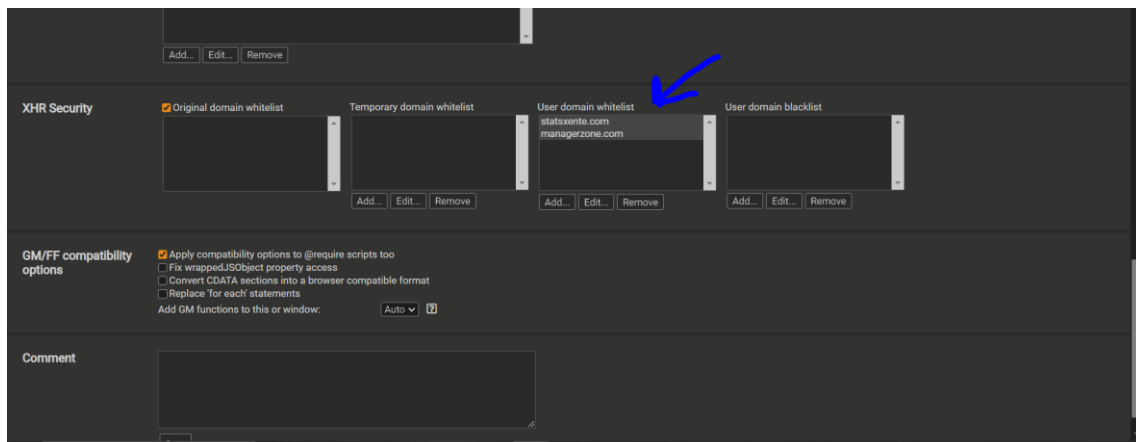

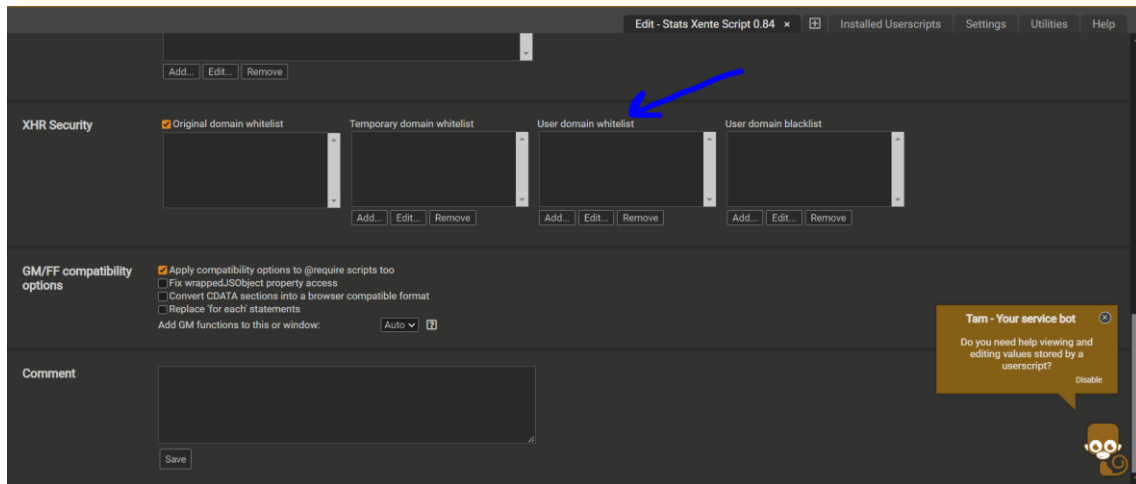

If after refresh the website the data not appears do this, click on Settings:

Go to bottom of page and add two domains to white list, statsxente.com and managerzone.com:

Refresh and try, if the extension still not working, please contact with xente else the script is correctly installed and the updated will be notified automatically.
